1. The first part of the paper is devoted to the study of the properties of the function  $f(x)$  defined by the equation  $f(x) = \int_0^x f(t) dt$ . It is shown that  $f(x)$  is a continuous function and that it satisfies the functional equation  $f(x+y) = f(x) + f(y)$ . The function  $f(x)$  is also shown to be differentiable and its derivative is found to be  $f'(x) = f(x)$ .

The figure consists of ten vertical rectangular panels, each representing a cross-section of a specimen at a specific stage of drying, labeled from I to X. Panel I shows a relatively uniform, dense structure. As the panels progress from II to IX, the internal structure becomes increasingly complex, showing more pronounced horizontal layering and some darker, possibly crystalline regions. Panel X shows a highly textured, almost fibrous or layered appearance, indicating significant structural changes due to the drying process.
